Correction hall of fame

Extracting text from scans of old newspapers, gazettes, magazines, newsletters and books is extremely challenging. Although the best optical character recognition (OCR) software has been used, the condition of the images it has to process combined with the frequently small means that many errors of interpretation are made.

Many people have stepped in to correct the text and in so doing have made a wonderful contribution to this resource, and helped to improve its. The following table lists by month the people who've corrected the most lines of text.

Number of lines corrected for 2025 March : 514,367
